Hardy MUMS

Plants Available in
May and June

Space the plants 2½ to 3 feet apart. To obtain bushy plants it is advisable to pinch the growing shoots once or twice during the season. The first pinching should be done when the plants are about 6 inches tall. At this time remove about an inch of the soft growing tips of the main shoots, to induce lateral branching. When these lateral branches are 10 inches tall, another inch of their tips should be removed. Early-blooming varieties should not be pinched after July 15, while the later blooming varieties may be pinched until August 1.

Scotts Spreaders

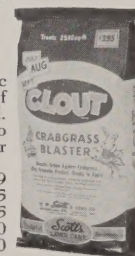

A Scotts Spreader makes you a lawn expert. You achieve pinpoint accuracy and avoid harmful overdosage because the spreader is engineered to accurately disperse seed, lawn food and weed controls at prescribed rates.

- No. 20.** Excellent for small lawns, easy to use, with a generous hopper capacity. \$12.95.
- No. 35.** Just right for the medium size lawn. Spreading width 18 inches. Easily hung up out of the way when not in use. \$16.95.
- No. 75.** For the suburban lawn owner who needs a larger hopper capacity. Spreading width 24 inches. Includes a special baffle plate that converts spreader into cart for hauling. \$24.95.
- No. 100.** Estate size and professional landscaper spreader. Ideal for large lawn areas. Spreading width 36 inches. Has semi-pneumatic tires. \$49.95.
- No. 100T.** All the sturdy features of the estate size machine plus the special adaptation for power pull. \$59.95.

Clout (For Crabgrass Control)

Clout is used in late summer as a drastic treatment for crabgrass that has got out of hand and become tough, wiry and matted. It may temporarily brown good grass. To apply, the proper scale setting on your Scotts Spreader is No. 7.

McArdle's Quality LAWN GRASS SEED

ESPECIALLY ADAPTED TO GREENWICH AND VICINITY

Grass Mixtures for Sunny Places

Turf-Maker

Highest quality lawn seed available anywhere. Blended to produce fine permanent lawns. Contains Certified Colonial Bent, Creeping Red Fescue, heavyweight Kentucky Blue Grass and Rough Bluegrass (*Poa trivialis*). Lb. \$1.59; 5 lbs. \$7.45; 25 lbs. \$35.95; 50 lbs. \$70.35.

McArdle's Special

Our own special mixture particularly adapted to soil conditions in this locality. Possesses exceptional staying qualities and produces a rich green lawn. Use 6 lbs. per 1000 sq. ft. Lb. \$1.30; 5 lbs. \$6.00; 25 lbs. \$28.00; 50 lbs. \$54.00.

SUNILAWN

Although Sunilawn has a rougher texture than the higher-priced mixtures, we consider it very practical. It grows well under rough soil conditions and contains white clover, which we highly recommend. Use 6 lbs. per 1000 sq. ft. Lb. \$1.00; 5 lbs. \$4.80; 25 lbs. \$22.00; 100 lbs. \$84.00.

GREEN-UP

This is a quick-growing, economical mixture of grasses. We do not recommend it for permanent lawn areas, although it is often used for such. Again we say that the high-priced grass seed mixtures are the least expensive when you consider the high cost of reseeding and renovating. Lb. 69 cts.; 5 lbs. \$2.89; 25 lbs. \$12.98; 50 lbs. \$24.49.

Town of Greenwich Grass Seed Mixture For Sun or Shade

ESPECIALLY ADAPTED FOR THIS LOCALITY

This is the same formula that is used in the beautiful parks of the Town of Greenwich. Because of its high fescue content, it is adapted to shade and sun. Its velvety green color is outstandingly good, and its texture is very fine. The Illahee Creeping Red Fescue in this mixture helps fight crabgrass. The repeat business on this new mixture also indicates to us that those who have tried it are most satisfied with the results. Lb. \$1.35; 5 lbs. \$6.40; 25 lbs. \$30.00; 100 lbs. \$118.00.

NEW! Merion Blue Grass Formula

This new grass formula contains Merion Blue Grass, Delta Kentucky Blue Grass, and Pennlawn Fescue. Merion Blue Grass makes up over 40% of the formula mixture. Its big advantage is that it is resistant to fungus diseases and stays green during the hot summer months. Because the seed is so small, one pound of this formula will sow 500 to 750 sq. ft. Lb. \$1.89; 5 lbs. \$9.15; 25 lbs. \$43.50.

Straight Merion Blue. Lb. \$2.15; 5 lbs. \$10.50; 10 lbs. \$20.50; 25 lbs. \$50.00.

Grass Mixtures for Shady Places

Turf-Maker

FOR
SHADE

The perfect companion for Turf-Maker. Blended of the finest shade-tolerant grasses. Contains Creeping Red Fescue, *Poa trivialis*, Chewing Fescue and Fancy Red Top. Lb. \$1.59; 5 lbs. \$7.45; 25 lbs. \$35.95; 50 lbs. \$70.35.

McARDLE'S SHADY

Another one of our special mixtures particularly adapted to shady areas in this vicinity. Contains Fescue, Kentucky Blue Grass and Rye Grass. Use 6 lbs. per 1000 sq. ft. Lb. \$1.30; 5 lbs. \$6.00; 25 lbs. \$28.00; 50 lbs. \$54.00.

Seaside Mixture

A special mixture of hardy grasses for use in the vicinity of salt water. Contains Seaside Bent, Kentucky Blue, Creeping Red Fescue and Fancy Red Top. Use 1 lb. per 100 sq. ft. Lb. \$1.50; 5 lbs. \$7.25; 25 lbs. \$35.00; 100 lbs. \$135.00.

Plant White Clover with Grass Seed

For sunny locations we recommend using 5 to 10% White Clover in a grass seed mixture. It stays green in dry weather and it helps to crowd out crabgrass. For best results use the new Wild White Clover, which is more compact and much more durable than the Common White Clover.

English Wild White Clover. Lb. \$2.50.

Common White Clover. Lb. \$1.00; 10 lbs. \$9.50.

McARDLE'S HI-ORGANIC FERTILIZER 10-6-4

For the very finest lawns and specimen trees. Contains 10% nitrogen, 6% phosphoric acid, 4% potash. "The best fertilizer ever made for Connecticut soil."

For new and old lawns apply 15 lbs. of this plant food per 1000 sq. ft. Grass Seed may be sown at same time, as this fertilizer has no effect on seed germination. For Evergreens and Trees complete directions on bag. 25 lbs. \$2.25; 50 lbs. \$4.25; 100 lbs. \$8.00; 500 lbs. \$38.75; 2000 lbs. \$150.00.

McArdle's Individual Grasses and Field Seeds

Prices on separate grasses and field seeds are subject to market fluctuations and therefore are subject to change without notice.

ILLAHEE CREEPING RED FESCUE. A permanent lawn grass that is particularly adapted to the shade. It spreads from the roots, making a dense turf which tends to crowd out weeds. Because of its deep roots, it is capable of standing dry weather. Grows well in sunny areas also. Lb. \$1.25; 10 lbs. \$12.00; 25 lbs. \$27.50.

KENTUCKY BLUE GRASS. Used mostly as a lawn grass. A permanent type of grass that produces dense, tough sod of a deep green color. It is slow in becoming established. Lb. \$1.25; 10 lbs. \$12.00; 25 lbs. \$27.50.

FANCY RED TOP. A nurse grass that lives about three years on turf kept cut. It gives a fine texture the first year of growth and then becomes quite coarse during the second and third years. It makes quick growth and nurses the permanent grasses until they become established. Lb. \$1.00; 10 lbs. \$9.50; 25 lbs. \$22.50.

TIMOTHY. A tall-growing Meadow Grass used mostly for hay and pasture. Grows quickly. Lb. 50 cts.; 10 lbs. \$4.50; 25 lbs. \$10.00.

COLONIAL BENT. This permanent grass, very fine in texture, is similar to that used on putting greens. Spreads rapidly by creeping underground roots. Requires close cutting and plenty of moisture. Lb. \$1.50; 10 lbs. \$14.00; 25 lbs. \$31.25.

DOMESTIC RYE GRASS. Also known as Common Rye Grass. A quick grower often used in lawn grass seed mixtures as a nurse grass to prevent the soil from washing. Lb. 25 cts.; 10 lbs. \$2.25; 25 lbs. \$5.00.

ORCHARD GRASS. A field grass used in pastures and meadows. Lb. 60 cts.; 10 lbs. \$5.75; 25 lbs. \$12.50.

PERENNIAL RYE GRASS. A short-lived perennial lasting three to four years. Used as a nurse grass in lawn seed mixtures and also in meadow mixtures for hay and pasture. Good for a temporary lawn. Lb. 35 cts.; 10 lbs. \$3.00; 25 lbs. \$6.25.

POA TRIVIALIS. Rough-stalked Meadow Grass. This variety of Blue Grass is available again. Thrives in shaded lawn areas. Deep green in color. Lb. \$1.00; 10 lbs. \$9.50.

ITALIAN RYE GRASS. A good temporary grass to grow in shaded areas. It is coarse in texture, like the other rye grasses. Lb. 35 cts.; 10 lbs. \$3.00; 25 lbs. \$6.25.

CHEWING FESCUE. A permanent grass particularly adapted to the shade. The blades are very fine and wiry and are gray-green in color. Its deep roots and tough texture makes it a very hardy and durable grass. It will also grow in sunny areas. Lb. \$1.10; 10 lbs. \$10.00; 25 lbs. \$22.50.

In Seeding Sloping Areas— USE SALT HAY

Salt Hay is now used in the making of lawns on sloping areas or steep banks where there is danger of the seed and soil washing out from heavy rains. The Salt Hay is applied after the seed is sown and left until the grass begins to develop. At the same time it also shades the newly seeded area and helps to prevent the soil from drying out. For this same reason also Salt Hay is often used on level areas in late spring or early summer seeding.

Since it contains no weed seed, it also makes an ideal mulch for the garden. Widely used in rose beds and around tomatoes and strawberries. It not only keeps the weeds down, but also retains moisture in the soil. Bale covers approximately 400 sq. ft. \$4.95 per bale.

Miscellaneous Field Seeds

BUCKWHEAT. Use $1\frac{1}{2}$ to 2 bu. per acre. Used as a summer cover crop. 48 lbs. per bu. Lb. 15 cts.; bu. \$6.50.

SOYBEANS, Black Wilson. Black-seeded variety. Use $1\frac{1}{2}$ to 2 bu. per acre if sown broadcast. In this section used mostly as a cover crop for improving the soil. 60 lbs. per bu. Lb. 20 cts.; bu. \$9.50.

SEED OATS. Use $2\frac{1}{2}$ to 3 bu. per acre. Often used as a cover crop. 32 lbs. per bu. Lb. 15 cts.; bu. \$4.50.

SPRING RYE. Sow 2 bu. per acre. A valuable crop to plow under for soil improvement. Requires about three months to mature. 56 lbs. per bu. Lb. 15 cts.; pk. \$2.00; bu. \$7.00.

FIELD CORN, Hybrid U. S. 13. For ears, 1 peck per acre; for silage, 2 pecks per acre; for fodder, 1 bu. per acre. One of the most popular hybrid varieties. Produces large ears having 20 to 22 rows and maturing in 118 days. 56 lbs. per bu. Lb. 50 cts.; pk. \$4.00; bu. \$12.00.

Meadow Grass Mixture

An ideal mixture for meadows and pasture. Use 100 lbs. per acre. Contains Timothy, Perennial Rye Grass, Orchard Grass and Red Clover. Lb. 70 cts.; 10 lbs. \$6.50; 25 lbs. \$16.00; 100 lbs. \$62.00.

Field Clovers

(60 lbs. per bu.)

Clovers are legumes. They take nitrogen from the air and put it into the soil and are, therefore, real soil improvers.

ALFALFA. A forage plant yielding an immense crop of hay. It likes lime. Sow 20 to 30 lbs. per acre. Lb. \$1.00; 10 lbs. \$9.50.

ALSIKE. A perennial Clover usually sown with other field grasses such as timothy and Red Clover. Excellent for pasturage or hay. Lb. 80 cts.; 10 lbs. \$7.50.

LADINO CLOVER. A large type of white Clover used in pasture mixtures for grazing, hay and silage. It is a good soil improver. When sown alone, 3 to 4 lbs. per acre is used. If sown with a mixture, 1 to 2 lbs. is recommended. Lb. \$1.25; 10 lbs. \$11.00.

RED CLOVER, DOMESTIC. One of the most nutritious of forage plants. If sown broadcast, 10 to 15 lbs. per acre is used. Lb. 90 cts.; 10 lbs. \$8.50.

THE CYCLONE SEED SOWER

An accurate portable seeder for all broadcast sowing. Fits over the shoulder and is provided with automatic adjustment for stopping flow of contents when required. 5 lb. capacity. \$9.95.

Meadow Grass Fertilizer

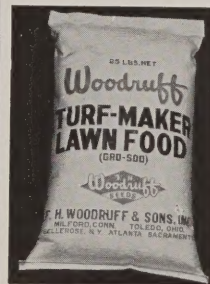

Fertilize your meadows and pasture areas with a complete fertilizer known as 5-10-5. It contains 5% nitrogen, 10% phosphoric acid and 5% potash. Apply as early as possible in the spring. Use 1200 lbs. per acre. 80 lbs. \$4.00; 800 lbs. \$35.00; 2000 lbs. \$77.00.

A Temporary Lawn of Domestic Rye Grass and White Clover

Where lateness of season, poor soil, or other conditions prevent one from making a permanent lawn, we recommend using a mixture of Domestic Rye 95% and White Clover 5%. Use 5 to 6 lbs. per 1000 sq. ft. When ready for the permanent lawn, this may be turned under. You thereby not only improve the physical condition of the soil by incorporating this green manure into it, but also increase the fertility content. Before reseeding permanently, apply a 10-6-4 lawn fertilizer at the rate of 10 lbs. per 1000 sq. ft. Grass Seed Mixture containing 95% Domestic Rye and 5% White Clover, lb. 35 cts.; 10 lbs. \$3.00; 25 lbs. \$7.00; 100 lbs. \$25.00.

GRO-SOD Lawn Food. F. H. Woodruff & Sons have found that an analysis of 10-6-4 feeds grass properly throughout the growing season. Nitrogen, the fertilizer element that induces luscious green leaf growth, predominates in this fertilizer. One pound of GRO-SOD Lawn Food is required for each 100 sq. ft. of lawn area, or 500 lbs. per acre. A fertilizer distributor will do an even, economical job. 25 lbs. \$2.85; 50 lbs. \$4.50; 500 lbs. \$43.50.

Since 1910 McArdle's have been authorized distributors of the reputable lawn and vegetable seeds of F. H. Woodruff & Sons, Milford, Conn.—48 years of a pleasant business relationship that speaks for itself.

McARDLE'S *Perennial and Biennial Flower Seeds*

Many hardy perennials and biennials (plants that require two years to produce bloom, after which they set seed and die) are easily grown from seed. An important thing to remember is that seed should be started as early as possible in order to develop good-sized plants which will winter over easily. Seedlings of most perennials can be carried over winter with the protection of a light mulch. Most biennials, however, require covering or wintering in a coldframe, especially in exposed areas. Raising your own plants from seed is an easy and inexpensive way to develop a perennial border.

- 216 ACHILLEA, The Pearl.** 2 ft. A vigorous perennial producing long slender stems of double white bloom from June to September. Pkt. 35 cts.; $\frac{1}{2}$ oz. 75 cts.
- 220 ACONITUM Napellus.** 3 ft. Spikes of dark blue flowers appear in early summer. Pkt. 35 cts.

The Book of Perennials

By Alfred C. Hottes

272 pages, well illustrated, \$4.00

For those desiring a continuous show of color from early spring to frost, this book will be extremely valuable.

Grow Your Own VEGETABLES for Good Eating

Varieties of vegetables that are starred ★ are especially adapted to freezing

Vegetables to Start Early Indoors

Vegetables that can be started indoors or in the hotbed are: Artichokes, Broccoli, Brussels Sprouts, Cabbage, Cauliflower, Celery, Eggplant, Leek, Lettuce, Parsley, Onions and Tomatoes. February 15 to March 15 is time enough for most of these vegetables. The seed may be started in flower pots, using the new sterile medium, Vermiculite, rather than soil. Individual varieties should be kept separate in each pot. The pots require less space than flats and may be handled much more easily. To insure against damping off, mix Rootone Disinfectant with the seeds at time of planting. When the seedlings are ready to be moved, they may be transplanted into flats or directly into the hotbed.

Asparagus

Plant as early in the spring as the soil can be prepared. Dig a trench a foot wide and as deep. Use 5 pounds of a complete fertilizer and 10 pounds of hydrated lime for each 50-foot row. Cover fertilizer with soil and set the roots 8 inches below the surface of the trench. Space them 18 inches apart, with 3 feet between rows. Cover roots with several inches of soil and firm each root well; as the shoots grow, the trench can be filled in with soil.

★**Mary Washington.** 2-year-old roots, \$6.00 per 100. 3-year-old roots, \$8.00 per 100.

Artichoke

Plant early in a greenhouse or hotbed. Set outside in May in rows 3 feet apart, space 2 feet apart in the row. Mulch in winter. Plants usually bear the second year. The flower buds are eaten boiled or raw.

296 Green Globe. Pkt. 25 cts.; ¼oz. 75 cts.; oz. \$2.00.

Beans, Green-Pod Bush

Plant after danger of frost has passed, and prepare the soil well. Sow in short rows at intervals of two weeks for a continuous supply. Set seed 1½ inches deep, 3 inches apart, with at least 2 feet between rows. Spray both sides of foliage with rotenone to check Mexican bean beetle. 1 pound will plant 100 feet of row.

590 Asgrow Stringless Black Valentine. 51 days. Round pods.

535 Bountiful. 48 days. Flat pods.

Fava Beans

597 Broad Windsor. Pkt. 20 cts.; ½lb. 45 cts.; lb. 85 cts.

Lima Beans, Bush

Grow best in rich soil. Plant after frost danger, when soil is warm. Set seed 1½ inches deep, and make sure eye of seed is down. Space seed 3 inches apart and later thin seedlings to 6 inches, with 2½ feet between rows. For insect pests, see Bush Beans. 1 pound will plant 100 feet of row.

585 Burpee's Improved Bush. 73 days. Heavy yielder. Pkt. 25 cts.; ½lb. 50 cts.; lb. 90 cts.; 5 lbs. \$4.25.

★**536 Fordhook 242.** 75 days. Pkt. 25 cts.; ½lb. 45 cts.; lb. 85 cts.; 5 lbs. \$4.00.

596 Cangreen. 70 days. "Baby Lima." Pkt. 25 cts.; ½lb. 45 cts.; lb. 85 cts.; 5 lbs. \$4.00.

Bean Beetle Dust

Lucky Strike No. 1000 Dust is especially prepared to kill Mexican bean beetles. It is non-poisonous and may be used even if the Beans are on the plant. Bean beetles are no longer a problem when you use this material. Also can be used to kill the cabbage worm. Lb. 60 cts.; 5 lbs. \$2.00.

Lima Beans, Pole

Culture same as Pole Beans.

583 King of the Garden. 88 days.

582 Leviathan. 80 days.

Above 2 varieties, pkt. 25 cts.; ½lb. 50 cts.; lb. 95 cts.; 5 lbs. \$4.25

Edible Soy Beans

588 Bansei. 95 days. Sow 1 pound per 100-foot row. ½lb. 40 cts.; lb. 70 cts.

Broccoli

For an early crop, start seed in hotbed or in a flat indoors. Set plants out as soon as soil can be worked; space 24 inches apart, in rows 2 feet apart. Be sure soil is well prepared and fertilized. For fall crop start seed in open ground in early June. Keep plants growing vigorously by using commercial fertilizer or nitrate of soda.

★**503 Calabrese.** 70 days. Pkt. 25 cts.; ½oz. 50 cts.; oz. 90 cts.

503A Broccoli-Rapa. Cooking greens. Pkt. 15 cts.; oz. 75 cts.

Beets

Sow as soon as soil can be worked easily. Make plantings in short rows 10 to 15 feet long, at intervals of two weeks for a continuous supply. Cover seed with ½ inch of soil; allow 18 inches between rows. When large enough to handle, thin seedlings. Beets are best to use when 2 inches in diameter. The tops of Beets may be used for greens in the early stages.

558 Crosby's Egyptian. 50 days.

556 Detroit Perfected. 55 days.

555 Early Wonder. 50 days.

554 Good For All. 55 days. Baby Beets.

Brussels Sprouts

Start seed indoors or in a coldframe. Transplant to moist, well-drained soil, allowing 2 feet between plants and 3 feet between rows. As sprouts begin to form at base of lower leaves, remove these leaves but always allow foliage to remain at top of plant for normal growth.

★**504 Long Island Improved.** 80 days. Pkt. 20 cts.; ¼oz. 40 cts.; oz. \$1.20.

Chives

262 100 days. Pkt. 25 cts.; ½oz. \$1.00; oz. \$1.85. Clumps, 50 cts. each.

Vegetables to Start Early Outdoors

Onion Sets, Peas, Radish, Lettuce, Spinach and Parsley. These are the frostproof vegetables and can be planted as soon as the ground can be worked.

Cabbage

For early crops start seed indoors four to five weeks before you plan to set them out; cover with $\frac{1}{2}$ inch of soil. For a successful crop Cabbage must be kept growing vigorously. Prepare soil well. Set plants 18 inches apart, in rows $2\frac{1}{2}$ feet apart. Late varieties need a little more space than early kinds. Grow both early and late kinds for a continuous supply.

- 198 Copenhagen Market.** 67 days. Pkt. 15 cts.; $\frac{1}{2}$ oz. 50 cts.; oz. 85 cts.

ANNUALS for Colorful

Flowers to Plant Early Indoors

Some annuals that can be started indoors or in the hot-bed are: Dwarf Dahlias, Asters, Alyssums, Verbenas, Petunias, Carnations, Salvias, Nicotiana, Ageratum, Sweet Peas, Snapdragons, Lobelias, Phlox Drummondii, and Stocks. The seed may be started in flower pots or even old coffee cans provided they are properly drained; use the new sterile medium, Vermiculite, rather than soil. Individual varieties should be kept separate in each container. Such containers require less space than flats, and may be handled much more easily. Set the container in a saucer or similar receptacle which is constantly filled with water. The pot automatically soaks up the amount of moisture required. To insure against damping off, mix Rootone disinfectant with the seeds at time of planting.

BOVUNG COW MANURE FOR ROSES

In the spring, carefully prepared dry cow manure is especially recommended for use in beds. It will not burn and may be used at the rate of 20 lbs. per 100 sq. ft. or 1 qt. per plant. 10 lbs. \$1.15; 25 lbs. \$1.75; 50 lbs. \$2.85 500 lbs. \$26.50.

QUALITY OF McARDLE'S ROSES

We believe you would prefer to pay the slight difference in price for the best in Roses rather than a lower price for inferior quality. The difference in satisfaction will be well worth while because of better flowering qualities. All McArdle's Roses are individually wrapped to insure you the best. Each plant is properly labeled so that any mix-up on varieties, which commonly occurs in mail-order houses, is carefully avoided. On the right is an illustration of one of our Roses packed in moist moss.
